

Centralized Accounting and Payroll/Personnel System

CAPPS Financials Release Notes

Oct. 27, 2022

October Release Notes

New Features

- PO End Date has been added to PSAUDIT
- The Employee Personal Data page has been enhanced to return the employees most current effective dated job profile information. This page is updated from HCM and used on several reports in addition to Travel and Expense. The update ensures accurate information and prevents data integrity issues.

Bug Fixes

- Fixed the issue caused by using a future effective dated row on a supplier location. Previously the outbound would not pick up these transactions due to the future date.
- The CMBL batch unique constraint issue was resolved.

Improvements

- Restored the ability to view the Cost History for an asset within the Asset related tile.
- Dually employed T&E users now default to only their T&E agency.

Thank You!
